Environment “Passion Towards 2030”

Transition to Sustainable Business

Our vision is to achieve long-term business growth alongside the responsible management of natural resources and the environment. We leverage digital technology, data management, and artificial intelligence (AI) to minimize social and environmental impacts for a sustainable future.

Environmental Sustainability

CPF is committed to conducting sustainable business by using digital technologies, data management, and artificial intelligence (AI) to protect the environmental in three key areas:

GHG Emissions

Water

Waste

World-class technologies implemented by CPF

Digital Systems and AI

Data Science

**Innovation and
Technology**

CPF is steadfast in **three industry-leading goals** built on our ongoing journey to reduce the environmental impact:

Net-Zero Emissions

Near-term target by 2030

- Reduce GHG emissions from energy use by 42.0%
- Reduce GHG emissions from land use change and land management by 30.3%

Long-term target by 2050

- Reduce GHG emissions from energy use by 90.0%
- Reduce GHG emissions from land use change and management by 72.0%

Water Resource Risk Management

Develop a plan to manage the impacts of flooding, drought, and water scarcity in all high-risk areas, with a commitment to achieving zero liquid discharge from food processing plants. The pilot plant will be completed by 2025.

Zero Waste to Landfill

Adopt circular economy principles by maximizing the use of organic raw materials, transforming by-products into valuable resources, and eliminating single-use plastics across all CPF operations. To achieving zero waste to landfill by 2030.

Passion toward 2030 environmental sustainability across the value chain with 5,000 million THB investment

Our Sustainability Journey

CPF's Journey Towards Net-Zero SBT Setting

BUSINESS AMBITION FOR 1.5°C

A Message from Our CEO

Mr. Prasit Boondoungprasert

Chief Executive Officer
Charoen Pokphand Foods Public Company Limited

“

CPF commits to achieving Net-Zero greenhouse gas emissions across the value chain by 2050.

”

GHG Reduction Target against Base Year 2020

Near-term Targets by 2030	42%	30.3%
	from energy usage	from land use change and land management

Long-term Targets By 2050	90%	72%
	from energy usage	from land use change and land management

CPF

is the first food processing company in the world

with near- and long-term FLAG SBT approved by the SBTi in an attempt to limit the global warming to

1.5 °C

*above pre-industrial levels

Our Boundary

CPF operates agricultural and food industry in

14 countries

America

USA

Europe

UK, Belgium, Türkiye, Russia

Asia

Thailand, China, Vietnam, India, Cambodia, Philippines, Malaysia, Laos, Sri Lanka

**Remark : Since 2024, the subsidiary in Poland has been restructured as a joint venture, therefore the boundary was adjusted and the base year GHG emissions were recalculated.*

Methodology

Traceability System

Our Ambitions

- Achieve deforestation-free sourcing goals for corn, soy, palm oil, cassava and paper of CPF Thailand operation by 2028
- Expand deforestation-free to wheat, barley and paper by 2030
- Create positive impacts on biodiversity by 2030
- Expand FOR FARM application to neighboring countries of Thailand

Key raw materials sourcing

Corn

Soy

Palm Oil

Cassava

Operations in Thailand

100%

of corn sourced by CPF comes from deforestation-free areas

Global Collaboration on Soybean Meal

Cross-Border Transparency

Global Business Partnership

BUNGE

Collaborate with **Bunge** to enhance cross-continental traceability (from Brazil to Thailand)

Leverage **Blockchain & Satellite**

Verified Results

CONTROLUNION

100% Traceability to the production source in Brazil, certified by an independent third party

Net-Zero Supply Chain Transition Plan

1

Traceability

Farm & plot-level polygon map to detect forest encroachment or deforestation overlaps

2

Risk Assessment and Monitoring

Real-time satellite monitor to detect land use changes and categorize risk of suppliers into high, medium, and low

3

Deforestation-free Policy

Key raw materials purchased must be verified as deforestation-free after the Dec 31, 2020 as the cut-off date.

4

Supplier Management

Focus on capability building, incentives, and strong relationships with farmers to secure a sustainable production base

5

Verification and Reporting

Independent third-party verification and public disclosure to build trust and ensure transparency

Goal: Build a transparent, accountable, and systematic deforestation-free supply chain.

1.Traceability

Tier 1 Suppliers

Supplier Identification & Plantation Mapping

Supply chain visibility expansion from Tier 1 suppliers to the source of origins

Beyond Tier 1

Map the supply chain down to the specific farm, plantation, or concession level where feed raw materials are grown

Plot-level geolocation

Map GPS points and polygon boundaries to audit and cross-check plantation areas with forest area maps

Data Integration for Traceability

Integration of purchasing data with plot-level geolocation of plantations

- Purchase data
- Plot-level geolocation

2. Risk Assessment and Monitoring

Transition from conventional audits to efficient and real-time risk governance

Proactive Risk Assessment

Supplier Risk Categorization

Classify risk levels of raw material suppliers into high, medium, and low by assessing the probability and impact of deforestation and regulatory non-compliance

Satellite Monitoring

Utilize satellite platforms to detect real-time land-use changes across raw material cultivation areas

Governance & Penalty

Grievance Mechanisms

Establish a formal process for whistleblowers and stakeholders to submit complaints

No-Buy List

Conduct a list of suppliers who violate policies to suspend business dealings

3. Deforestation-free Policy

In 2023, CPF adopted a Deforestation-Free Policy aligned with SBTi standards for corn, soybean, palm oil, and cassava, while working with suppliers to establish a traceability system linked to the Global Net-Zero Platform.

Deforestation-Free Policy

Cut-off Date 31 December 2020

Agricultural raw materials sourced from land deforested after December 31, 2020, will be strictly barred from procurement.

Non-Negotiable Requirement

Compliance with this policy is a fundamental condition of engagement that all raw material suppliers must strictly follow.

Standards & Certificates

International Certifications (RSPO & RTRS)

RSPO and RTRS certifications, verified by independent third parties, support raw material traceability and help reduce sourcing risks. However, certification is a risk management tool and does not guarantee 100% compliance or accuracy.

4. Supplier Management

Partner with suppliers throughout the transition process through capacity building, incentive programs, and relationship management

Capacity Building & Incentives

Capacity Building

Train smallholders to increase yields on existing plots, eliminating the need for forest encroachment

Incentives

Secure long-term contracts and preferred supplier status for partners with strict environmental compliance

Risk Mitigation & Inclusivity

Relationship Management

Avoid instant contract termination to prevent suppliers from moving to unethical buyers

Smallholder Inclusion

Structure strategies to shield smallholders from the financial burden of compliance data

5.Verification and Reporting

Independent Third-Party Audits

Verify satellite data and raw material traceability datasets

Financial Indicator Linkage

Incorporate deforestation-free sourcing performance into financial cost structures

Public Disclosure of Progress

Publish annual performance metrics on the percentage of deforestation-free supply chains

2025 - 2026 Performance
